

SHIPBUILDING

Chemical cleaning

Chemical cleaning is the most efficient and economical way to clean process equipment and systems and achieve good performance. AEKS has extensive experience of over 30 years of precision cleaning services for pipeline system, tanks and process equipment in shipbuilding industry. AEKS carries out both Pre-operational and Maintenance Chemical cleanings. Pre-operational chemical cleanings guarantee that all process equipment will operate smoothly and correctly during startup and operation. This procedure is used to clean systems of any material residue after construction activity and to create corrosion resistant layer. Maintenance Chemical Cleanings seeks to return the system to its intended/initial working state, improving flow rates, removing the fouling/deposits, reducing corrosion and extending equipments' life. Our skilled and dedicated employees provide customized solutions, faster turnaround and lower overall cost.

ACTIVITIES

- Pipeline cleaning
- Process equipment cleaning
- Passivation
- Tank cleaning

EQUIPMENT

- Chemical resistant pumps
- Wastewater storage tanks
- Circulation system
- High-pressure pumps
- Purified water system

30+ years of
experience
