

INDUSTRIAL

Robotic cleaning – No-man entry tank cleaning

After providing storage tank cleaning services for over 30 years, AEKS developed no-man entry system for effective and safe cleaning of storage tanks and confined spaces inside refineries, terminals and chemical plants. Our tank cleaning system is consisted of 2 x 10ft containers, which means it can be transported easily to the work site. This ensures we meet the highest standard with the tank cleaning robot operating in Zone 0. The operators cabin is in the 10ft container which is placed in Zone I and the power system in the other 10ft container which can be placed in Zone 2. AEKS tank cleaning system is fully independent and does not need external power source. AEKS provides unique solutions that minimizes hazards, ensures a safe work environment, reduces downtime and overall cost.

ACTIVITIES

- Storage tank cleaning
- Biogas plants cleaning
- Sewage cleaning
- Wastewater tank cleaning
- Silos cleaning

EQUIPMENT

- Robot
- Power system
- Two 10ft containers
- Mobile tricanter
- High-pressure nozzles
