## Saugbagger | Suction Excavator

The high powered suction excavators and industrial vacuum trucks (Vacupress) are suitable for maintenance operations at production facilities and for vacuuming up any kind of dry, wet or dusty material inside refineries, steel mills, glassworks, paper mills, incinerators or in construction. Suction excavators are intended not only for suctioning dry, wet and liquid materials, but also for blowing loose materials to a target location on the construction site or for carrying out excavation work. The saugbagger is using trenchless technology excavations because the surrounding cables or pipes are not damaged during extraction. Saugbagger ensure efficient and faster work operations because technology of the machine has a huge suction power of 44,000 m<sup>3</sup>/h and a large suction pipe diameter of 250 mm. AEKS provides unique solutions that ensure a safe working environment, reduce work execution time and downtime, the amount of waste and total costs.

### ACTIVITIES

- Solid, liquid and dust material suction
- "Trenchless" excavation technology
- Removal of building renovation debris
- Silo cleaning in plants
- Long distance suction

### EQUIPMENT

- RSP Saugbagger
- Koks Cyclovac
- Cappellotto Capbora
